Clematis

Grade #1 Bare Root

Container:
Premium 1 Gallon Pot

Finish:
8-10 weeks

When To Plant:
Late winter to spring

Growing Temperature:
60-65° F

Soil pH:
5.8-6.2

Fertility:
Moderate feed rates of 75 - 125 ppm N at each watering. For Controlled Release or Slow Release Fertilizer, see your preferred supplier for recommended rates for incorporation or top dressing, as it varies by fertilizer.

Potting and Timing:
Plant bare root plants in late winter to spring.

Planting Level:
Plant crown slightly below the soil line.

Lighting:
Grow in high light levels.

Holding Temperature:
50-60° F

EC Level:
2.0-3.0 pour through method

Vernalization:
Bare root plants will arrive vernalized.

Pests and Diseases:
Wet conditions may cause root and crown rot. Aphids, mites, and thrips may ocasionally be found on bush clematis.

Moisture:
Moderate moisture

PGRs/Pinching:
Uniconazole (Sumagic/Concise) may be used at 5 ppm to reduce internode stretch, creating a fuller looking plant.

Grower Tips:
Herbaceous clematis do not tendril and climb like their vining counterparts, but do benefit from a trellis or obelisk they can lean against.
