

Alcea (Hollyhock)

30ct Plug

Container:

Trade 1 Gallon Container

Finish:

6-8 weeks

When To Plant:

Early spring to early summer

72ct Plug

Container:

Trade 1 Gallon Container

Finish:

8-10 weeks

When To Plant:

Early spring to early summer

Growing Temperature:

65-70° F

Soil pH:

5.5-6.2

Fertility:

Feed with 75-100 ppm N at each watering or topdress with a CRF at a medium rate.

Pests and Diseases:

Mallow flea beetle, capsid beetle, caterpillars, two-spotted mites, Japanese beetle, slugs, stalk borer.

Leaf spot(*Cercospora*), rust, anthracnose, crown gall, *Pythium* root rot.

Rust can overwinter on debris left from the previous growing season. Clean up dead leaves and plant parts in the fall.

Lighting:

Alcea has an obligate long day requirement for flowering. They will not flower when grown under short day lengths. If early flowering is desired, it is recommended to provide at least 14-hour photoperiods or night interruption lighting when the natural day lengths are less than 14 hours.

Holding Temperature:

50-60° F

EC Level:

2.0-3.0 pour through method

Vernalization:

Alcea should be vernalized for 6-8 weeks at 40° F or below.

Potting and Timing:

Apply a preventative fungicide at transplant.

Moisture:

Water Alcea thoroughly and allow the plant to dry slightly between waterings. Established Alcea plants will require more consistent watering.

Planting Level:

Plant plug even with soil line.

PGRs/Pinching:

Foliar applications of 15 ppm Paclobutrazol (Bonzi, Paczol or Piccolo) or 2.5 ppm Uniconazole (Concise or Sumagic) are effective at controlling plant height when they are applied early in the crop.

Other Comments:

Allow plants at least 6 hours of full sun. They do not flower well in shade.

Grower Tips:

Alcea will flower in 10 weeks when forced at 65-70° F.
