

Aralia (Golden Japanese Spikenard)

20ct Plug

Container:

Premium 2 Gallon Pot

Finish:

6-8 weeks

When To Plant:

Spring through summer

72ct Plug

Container:

Premium 1 Gallon Pot

Finish:

8-10 weeks

When To Plant:

Spring to summer

Growing Temperature:

65-68° F

Soil pH:

5.8-6.5

Fertility:

Aralia prefers a moderate feeding rate of 75 - 125 ppm N at each watering.

For Controlled Release or Slow Release Fertilizer, see your preferred supplier for recommended rates for incorporation or top dressing, as it varies by fertilizer.

Moisture:

Consistent moisture is very important for Aralia. Do not allow plants to dry out.

Planting Level:

Even with the soil line.

Lighting:

Day neutral

Provide light to moderate shade. Too much shade will cause the plant to lose its bright color.

Holding Temperature:

50-60° F

EC Level:

2.0-3.0 pour through method

Vernalization:

Vernalization is not required.

Pests and Diseases:

Spider mites and thrips can be the most problematic. Scout on a regular basis and treat as necessary.

Potting and Timing:

Plant the large plug into a 2 gallon container for best results. Aralia is a quick grower and becomes too large for smaller containers. 20 count plugs will finish a 2 gallon container in roughly 6-8 weeks at 65° F.

PGRs/Pinching:

Plants can be pinched if needed but is often not necessary.
