Finish: 7-9 weeks	Finish: 10-12 weeks	Finish: 10 weeks
When To Plant: Late winter to spring	When To Plant: Late winter to spring	When To Plant: Late winter to spring

Growing Temperature:

60-65° F day

55° F nights

EC Level:

1.5-2.0 pour through method

Vernalization:

Provide 8-10 weeks of cold below 40° F for flowers.

Pests and Diseases:

Leaf spot (Ramularia or Cercospora), stem canker (Leptosphaeria).

Potting and Timing:

Begin growing plants cool at 55-60° F for the first couple of weeks. Increase temperature to speed flowering or lower temperature to delay flowering.

Planting Level:

Place crown at or slightly below soil line.

PGRs/Pinching:

Sumagic (Uniconazole) 5 ppm spray 3-4 weeks after transplanting if needed. Multiple applications may be needed at 7-10 day intervals.

Holding Temperature:

45-55° F

Soil pH:

5.5-6.5

Fertility:

After new leaves emerge use a water-soluble fertilizer, solutions of 50-100 ppm at each or every other watering.

For Controlled Release or Slow Release Fertilizer, see your preferred supplier for recommended rates for incorporation or top dressing, as it varies by fertilizer.

Moisture:

After plants are established keep consistently moist. If plants dry out, their foliage turns irreversibly brown and crispy, thereby rendering them unsaleable.

Water well after planting and increase watering as the foliage emerges.
