### 72ct Plug
- Container: Trade 1 Gallon Container
- Finish: 6 - 8 weeks then provide dormancy (spectabilis)
- 10-12 weeks ('Fire Island')
- When To Plant: Late summer to fall (spectabilis)
- Late winter to spring ('Fire Island')

### Growing Temperature:
- 50-55° F

### Soil pH:
- 5.8-6.4

### Fertility:
- Feed 100 - 150 ppm N at each watering.

### Pests and Diseases:
- Downy mildew, Fusarium wilt, powdery mildew, rust, Sclerotium and Verticillium wilt that may occasionally be observed.
- Aphids, caterpillars, fungus gnat larva, slugs, spider mites, thrips and whiteflies commonly feed on dicentra.

### Planting Level:
- Eyes slightly below the soil line.

### Lighting:
- Dicentra prefer moderate shade in production.
- Dicentra 'Fire Island' prefers full sun.

### Holding Temperature:
- 40-50° F

### EC Level:
- 1.5-2.5 pour through method

### Vernalization:
- Provide 8-10 weeks of cold temperatures below 40° F.

### Potting and Timing:
- Plant bare root plants in late winter to spring. Small plugs are best planted in late summer and bulked before vernalization.

### Moisture:
- Most dicentra prefer moderate moisture.
- Dicentra 'Fire Island' prefers to be slightly moist.

### PGRs/Pinching:
- If height control is required, daminozide (B-Nine or Dazide) is effective at reducing elongation. One to two applications of 2,500 ppm should provide adequate height control.
Grower Tips:

Take note that Dicentra 'Fire Island' requires different growing conditions than Dicentra spectabilis types. Dicentra 'Fire Island' should be potted in no larger than a trade one gallon container due to its compact size.
