**Growing Temperature:**
- Rooting out and Growing on 65-72°F

**Soil pH:**
- 5.8-6.2

**Fertility:**
- Needs 200ppm fertilizer for optimum growth.

**Pests and Diseases:**
- No serious pests or diseases affect Gypsophila. You'll want to scout for Thrips, Mites and Leaf hoppers on a regular basis. Watch for Botrytis blight and stem rots with too much moisture.

**Moisture:**
- Moderate to moist.

**PGRs/Pinching:**
- No pinching or growth regulators needed.

**Other Comments:**
- Will continue to bloom without dead-heading but removing old blooms may encourage additional blooming.

**Holding Temperature:**
- 40-50°F outdoor

**EC Level:**
- 1.25-2.0 pour through method

**Vernalization:**
- Cold beneficial. Cool for 6-9 weeks for increased bud count.

**Potting and Timing:**
- A slow grower, so plan accordingly. Warm and slightly dry conditions after transplanting speeds rooting in and growth.

**Planting Level:**
- Place crown at or slightly higher than the soil level.

**Lighting:**
- Plants need long days or supplemental light to flower early. Hold at 40-50°F outdoor temperatures.
