

# Miscanthus

## 30ct LF Plug

Container:

Premium 1 Gallon Pot

Finish:

7-9 weeks

When To Plant:

Summer - late summer or spring

Notes:

Save finished 1 gallon plants to step up into 3-5 gallon containers in the fall. This will yield large plants for the following season.

## 72ct Plug

Container:

Trade 1 Gallon Container

Finish:

8-10 weeks

When To Plant:

Early to mid summer

Notes:

Save finished 1 gallon plants to step up into 3-5 gallon containers in the fall. This will yield large plants for the following season.

## Growing Temperature:

75° F days

60° F nights

## Fertility:

Miscanthus are heavy feeders.

Feed 100-200 ppm N at each irrigation. Or incorporate controlled release fertilizer at 1.25-1.5 lbs per cu.ft. of growing media.

## Potting and Timing:

Bare root plants can be trimmed to fit the pot.

Do not plant too deep or too high. Miscanthus is a warm season grass that requires long days and warm temperatures. They perform best when planted in the summer months.

## Planting Level:

Pot up at the same level as the liner.

## PGRs/Pinching:

The following products are recommended for Miscanthus and should be applied as a drench. 10-ppm Topflor ( flurprimidol, SePRO), 10-ppm paclobutrazol (Bonzi, Syngenta Professional Products; Piccolo, Fine Agrochem-icals Limited; or Paczol, Chemtura Corp.) and 2-ppm Sumagic (uniconazole, Valent U.S.A. Corpora-tion).

Apply when plants reach 10-12 inches tall.

## Soil pH:

5.8-6.3

## EC Level:

2.0-3.0 pour through method

## Vernalization:

12-14 weeks of cold are needed for flowering.

## Pests and Diseases:

Scout for insects and spray as required. A weekly fungicide application will help prevent foliar diseases.

## Moisture:

For potting soil use Commercial planting media.

Roots must be kept moist prior to potting and plants must be kept from freezing, preferably above 45° F, both before and after transplanting.

Water sparingly until new growth appears. Roots must be kept moist prior to potting and plants must be kept from freezing, preferably above 45° F, both before and after transplanting.

## Lighting:

Requires long days to grow. Do not attempt to grow under short days as plants will not become active.

## Other Comments:

Overwintering Information:

- Containerized grasses are more susceptible to loss than those in the landscape.
- Keep in a poly-covered house and cover with perennial cloth.
- Maintain temperatures above 25° F. Bait liberally for rodents.

**Grower Tips:**

As with most warm season grasses it is recommended to bulk them in the summer of the year prior to sales. If larger containers are desired then start with a large plug or bare root in early summer. These plants can then be stepped up into 3-5 gallon pots the following spring. Large containers often require two full growing seasons to produce.
