

Platycodon (Balloon Flower)

Grade #1 Bare Root

Container:

Trade 1 Gallon Container

Finish:

6-8 weeks

When To Plant:

Late winter to spring

Growing Temperature:

64° F

Soil pH:

5.5-6.0

Fertility:

Apply a constant feed of fertilizer at 100-150ppm N, 10-20 ppm P, and 100-150 ppm K, (or 20-10-20).

Pests and Diseases:

Whiteflies and aphids.

Moisture:

For potting soil use Commercial planting media.

Let plants dry thoroughly between waterings and avoid water-logging. Keep on the dry side.

PGRs/Pinching:

B-Nine at 2500 ppm 1-2 applications 14 days apart.

Sumagic at 5 ppm 1-2 applications.

Other Comments:

Platycodon is late in breaking dormancy, so be patient. Warmer temperatures will hasten plant development.

Overwintering Information It is important to keep platycodon on the dry side. They do not enjoy excessive amounts of moisture.

Holding Temperature:

Avoid large temperature swings.

EC Level:

1.5-2.0 pour through method

Vernalization:

Not required but is beneficial for increased size and number of flowers.

Potting and Timing:

Tap root can be trimmed slightly if necessary to fit in pot.

This tap root needs to be planted high. The upper bulkier part of the root should protrude about 1 inch above the soil line once the soil settles.

Planting Level:

Plant high.

Lighting:

Grow under high light levels. Platycodon flowers 7-10 days quicker under long days.
