Sedum (Autumn Stonecrop)

**72ct Plug**

Container:  
Premium 1 Gallon Pot

Finish:  
10-12 weeks

When To Plant:  
Summer to late summer

Notes:  
Bulk in summer for a full plant the following spring.

**Grade #1 Bare Root**

Container:  
Premium 1 Gallon Pot

Finish:  
8-10 weeks

When To Plant:  
Spring to late spring

**Growing Temperature:**

70-75° F days

55-65° F nights.

**Fertility:**

Needs 100-200 ppm fertilizer for optimal growth.

**Pests and Diseases:**

Preventive fungicides recommended at time of transplant. Mildew can be problematic, treat as needed.

**Moisture:**

For potting soil use Professional planting media. Avoid overwatering; extended periods of wet soil will be detrimental.

**PGRs/Pinching:**

One soft pinch, 1 week after planting. Second pinch optional. Florel® at 500ppm is also effective at increasing branching. B-9 / Cycocel tank mix will control growth; however, growing plants dry will also control growth. Larger plants with better branching and form will occur with vernalization.

**Soil pH:**

5.8-6.5

**EC Level:**

2.0-3.5 pour through method

**Vernalization:**

Not required.

**Potting and Timing:**

Some root trimming may be necessary at planting time to fit into the container.

Warm and slightly dry conditions after transplanting speeds rooting in and growth.

**Planting Level:**

Place crown just at or below soil level.

**Lighting:**

Requires high light in production; in a very high light environment, such as Southern California, plants may need up to 30% shade to protect against sun scorch.

Sedum require long days to flower. Once buds form plants can be moved to a short day environment.
